## Linear Models <br> Practice Problems

1. The length of a rectangle is 2 inches less than three times its width. If the perimeter of the rectangle is 108 inches, find its length and width.

ANS 14 inches by 40 inches
2. One angle of a triangle is 20 degrees greater than the smallest angle and the third angle is twice the smallest angle. Find the three angles. HINT: The sum of the angles of a triangle is 180 degrees.

ANS $\quad$| 40 degrees, 60degrees, |
| :--- |
| 80 degrees |

3. The computer store has reduced the price of a computer by $15 \%$. What is the original price of the computer if the sale price is $\$ 1275$ ?

ANS $\$ 1500$
4. Carlos can walk 8 miles in the same time it takes him to jog 12 miles. His jogging rate is 5 miles per hour faster than his walking rate. At what rate does he walk? How long does it take him to walk 8 miles?

$$
\begin{array}{ll}
\text { ANS } & 10 \mathrm{mph} \\
& 48 \text { minutes }
\end{array}
$$

5. Two cars leave the same point traveling in opposite directions. The second car travels $15 \mathrm{~km} / \mathrm{hr}$ faster than the first, and after 3 hours they are 465 km apart. How fast is each car traveling?

ANS $70 \mathrm{~km} / \mathrm{hr}$ $85 \mathrm{~km} / \mathrm{hr}$
6. Two boats leave an island at 8:00 a.m. sailing due north. If one is going 5 mph faster than the other, how far apart will they be at 3:00 p.m. the same day?

$$
\text { ANS } 35 \text { miles }
$$

7. A chemist has one solution containing a $10 \%$ concentration of acid and a second solution containing a $15 \%$ concentration of acid. How many milliliters of each should be mixed in order to obtain 10 milliliters of a solution containing $12 \%$ concentration of acid?

ANS 6 ml of $10 \%$
4 ml of $15 \%$
8. A person invests part of $\$ 62,000$ in a certificate that yields $13.2 \%$ simple annual interest and puts the rest of the money in a certificate that yields $13.7 \%$ simple annual interest. At the end of one year, the combined interest on the two certificates is $\$ 8,354$. How much did the person invest in each certificate?

$$
\begin{array}{ll}
\text { ANS } & \$ 28,000 @ 13.2 \% \\
& \$ 34,000 @ 13.7 \%
\end{array}
$$
